Supporting Science that Improves the World’s Water Resources

As urbanization skyrockets, population growth continues, and globalization expands, the world’s demand on water resources will inevitably increase. The North American Bethological Society (NABS) dedicates its resources to understanding the basic and applied functions of aquatic ecosystems. Only with this understanding can the longevity and quality of water resources be ensured.

As a sponsor of the 2011 NABS Annual Meeting you are supporting:

- Exchange of knowledge and ideas related to the understanding of aquatic ecosystems
- Technical training for the next generation of professional aquatic scientists
- Public and K-12 teacher educational opportunities on issues related to regional and global water issues
- A greater appreciation of the diversity and quality of New England’s estuarine and freshwater resources

Levels of Giving

In addition to supporting a greater understanding of water resources, your sponsorship publicizes your company to nearly 1,700 new clients and customers, all with an active interest in the outdoors.
